

ACKNOWLEDGE

I would like to express my deep gratitude to all those people who have contributed to the knowledge and experience that I have gained during this project work.

I express my sense of sincerity and profound gratitude to the Project Guide, **Mrs. Asha Joseph** , Assistant Professor, BCA Department, PES College Bangalore South Campus, for being a source of inspiration and her co-operation and also for her constant support in the making and evaluation of the project.

I would also like to thank and express my heartfelt regards to **Mr. Dilip Maripuri**, Principal, PES College Bangalore South Campus, for his support in developing the software.

Finally, I thank my parents , all faculty member of the department of BCA and friends who have been a source of inspiration for the completion of the project.

Aamir Pasha
(157NSB7001)

ABSTRACT

Diginotes is a revolutionary product which connects teachers with their students. Diginotes is a platform where a teacher can upload the notes and share it with their students. In the era of booming technology teachers still use email services to send notes to their students, Diginotes solves this problem where the teachers can upload notes in there Dashboard by clicking on Add Subject and by entering the subject details and inside the subject, teachers can upload there files.

Student dashboard will be filtered by the college code of the teacher. This makes it easier to share notes for teachers belonging to the same college/ block. Students can either view the notes online or can download the notes.

Chapter-1

Introduction

This Chapter gives a brief description about the Digital Notes which helps in telling about the website.

This is the computerized system that facilitates the management of sending the notes to student from teachers all through a website .

Earlier, in school and colleges the teacher used to send the assignments during the class time. If the student missed that class then they have to ask their friends for the assignment or wait until next day to ask the teacher.

The concept of digital message was first developed by the Deja News Research Services, which was later acquired by Google. Now it is now known as Google Group. Eventually the concept was utilized on the global platforms such as in every schools and colleges making the student life a little more easy.

It replaces old-fashioned, paper-based techniques with computerized methods that tends to be less efficient and tedious.

This is a website known as Diginotes which helps in easy and efficient use for education.

This website helps the teachers to easily upload the important documents and the assignments for the students according to the needs of the teacher.

DIGINOTES

The sending of notes which was handled manually is computerized to preserve time and make it more efficient.

Chapter 2

BACKGROUND STUDY

The Background study provides information about the details that includes a review of the area being researched, current information surrounding the technology, previous studies on the technology, and relevant history on the technology and the databases used.

2.1 Literature Review

The background study which is done on this below mentioned website provides and supports various schools and colleges efficiently.

It helps the users to use their services effectively without any manual errors as it allows the teacher to send the notes and the student can acquire the required notes without any problem.

Google Group is a service provided by the Google so that the people who are sharing the common interest can come forward and share their views. This Group service provides a gateway to Usenet newsgroups via shared user interface.

It was actually started by Deja News Research Service, which was later acquired by Google in 2001. Over the next several years, Google kept improving the Google group, starting by giving the ability to create individual group. Next functionality was to create internal web pages, post files and even create user profiles within the group.

All have to do is create a group specifically for the class and invite the classmates to join the group. Throughout the semester, the students can share the messages to each other, upload files for review and collaborate on the webpage, all through Google Group.

2.2 Technology Used

Basically, Used Hyper Text Markup Language (HTML), Cascading Style Sheets (CSS), Bootstrap , JQUERY , JavaScript and Personal Home Page(PHP) is the technology used. HTML and CSS are the core technologies used for creating webpages. HTML is basically used to create the contents of the page and CSS is used for designing the pages. Bootstraps are also HTML and CSS design based templates. JQuery is a lightweight, "write less, do more", JavaScript library. With AJAX, web applications can send and retrieve data from the server occurring at different times. PHP is used to mainly focus on the server side scripting.

2.3 Database Used

MYSQL (Structured Query Language) for the database. It is also called as SQL (Structured Query Language). By accessing the tables together, a Relational Database Management System (RDBMS) on the whole provides more flexible reporting and functionality within this application to the users which makes their task simple and easy.

Chapter 3

PROJECT OVERVIEW

This Chapter provides information about the Software which is developed i.e., The Digital Notes.

3.1 High-Level Description of Project

This website helps in the easy and efficient transferring of notes by allowing the teachers and the students to have complete security by giving him/her a username and password.

Everything from sending the notes to receiving it from the teacher to the students can be easily made possible with this website.

This website is very much user friendly in the various aspects such as record updating, searching and deleting.

This website based Digital Notes is created to handle all the information needed to send the documents to the students. A database is maintained to handle all the details and required backup.

All the information that which is stored in the database cannot be retrieved by any other user except the authorized user. Only the authorized user can access the necessary information.

3.2 REQUIREMENT ANALYSIS

3.2.1 Hardware Requirement

Processor : Intel Core Duo 2.0 GHz or Higher

RAM : 1GB or Higher

Hard Disk : 80 GB or Higher

Keyboard : Normal or Multimedia

Mouse : Compatible mouse

Monitor : LED

3.1.1 Software Requirements

For software first we need an operating system on which any web browser can be used to run the app.

Front side language : HTML and CSS

Back End : MySQL

Client Side Language :PHP

Server : Xamppserver[For offline use]

Web Browser : Google

Operating System : Windows

Chapter 4

SYSTEM ANALYSIS

This Chapter gives the hitches of the existing system which is the problem definition and also provides some of the characteristics of the Proposed System and Existing System.

4.1 Problem Definition

The school education includes managing and administering of large amount of notes to be maintained and hence it can lead to many complicated problems in this above mentioned field/aspect.

Hence due to the above caused problems the education system tends to work towards solving these problems.

Also, the website is user friendly, therefore no specialized and extensive learning is required. Simple knowledge of the Computer is sufficient for operating of the system successfully.

4.1.1 Existing Problem

The existing system of sharing notes is the manual system of administration which is time consuming and inefficient and causes human errors.

There are many problems in the existing system such as, it is Time consuming, tedious, security and has low accuracy.

4.1.2 Proposed System

The project is about sharing notes. It help us to shorten the barrier between teachers and students by helping teachers share their notes to their students more easily and flexibly. It over comes the problem where the teacher has to manually enter the email to share her notes, instead DigiNotes automatically

filters the college, department and the semester which makes it easy to share the notes. In Diginotes teacher can upload pdf, doc, docx or ppt file format.

4.2 Functional Requirement

FR -01	1.User registration: User can register into the website
FR-02	2.User logout: It lets the user to logout when the job is done.
FR-03	3.Create/Delete subjects: Teachers can add and delete their subject .
FR-04	4.Upload/Delete files: Teacher can upload and delete their subject files.
FR-05	5.View files: The Teacher and Student can view the files.

Table 4.2 Functional Requirements

4.3 Module Description

- Files allows the teacher to send the notes to the students.
- Student Signup allows the student to register into the group so that he is able to receive the documents from the teacher.
- In Subject module, The teacher can create the subject folder through which they send the notes and the students can easily identify which subject notes are that.
- Teacher Signup allows the teacher to register in the website so that they can send all the important notes to its students.

4.4 Non Functional Requirement

- Non Functional needs define the required performance ,safety , security, maintainability, portability and requirement . .

-

4.4.1 Performance Requirement

- The system shall be available 24/7
- When data / information is requested it shall be presented on screen in a moment.
- System shall be able to accommodate numerous simultaneous users at a time.

4.4.2 Safety Requirement

- The details are maintained properly
- Users must be authenticated

4.4.3 Security Requirement

- After entering the username and the password the user can access his/her profile
- The details are kept safe

Chapter 5

DESIGN

5.1 DIAGRAM

5.1.1 Entity - Relationship Diagram

An entity-relationship diagram (ERD) is a data modeling technique that graphically illustrates an information system's entities and the relationships between those entities. An ERD is a conceptual and representational model of data used to represent the entity framework infrastructure.

5.3 Table Structure

A database is a collection of information that is organized so that it can be easily accessed, managed and updated.

Data is organized into rows, columns and tables, and it is indexed to make it easier to find relevant information. Data gets updated, expanded and deleted as new information is added. Databases process workloads to create and update themselves, querying the data they contain and running applications against it.

5.3.1 Database Tables

```
mysql> show tables;
+-----+
| Tables_in_diginotes |
+-----+
| files                |
| student_signup       |
| subject              |
| teacher_signup       |
+-----+
4 rows in set (0.00 sec)
```

Attribute	Value
Form	Teacher sign in
Action	Checks if the right person is logging in
Expected results	If username and password is incorrect then it is not a successful login

Table 7.4 Teacher sign In

The image shows a web interface for logging in as a teacher. At the top, there is a circular profile picture of a person with dark hair. Below the picture, the text "Login as Teacher" is displayed. A prominent orange error message box states: "The email or password you entered is invalid". Underneath the error message are two input fields: "Email" and "Password". Below these fields are two buttons: "Sign up" and "Log In". At the bottom of the interface, there are two large buttons: "STUDENT LOGIN" and "TEACHER LOGIN". The "TEACHER LOGIN" button is highlighted in a dark blue color, while the others are in light gray.

Chapter 8

CONCLUSION

- The DIGINOTES is a great improvement over the manual existing system.
- The computerization of the website has speed up the process. It allows the teacher to manage and administer the sending of the notes and assignments in an orderly manner and with higher efficiency. In the current system, the school managing was very slow which is rectified in the computerized system.
- In the future, DigiNotes can be enhanced by providing centralized data base so that customers can do access the files and many other interesting functionality like feedback session, apart from notes, images, video irrespective of size can be send etc,. If in the future any other facility has been added by the schools and the colleges, then the new module for the same will be successfully added.
- The DigiNotes was thoroughly checked and tested with dummy data and thus is found to be very reliable and efficient.
